Can I install solar power without a combiner box

Overview

Do I need a solar combiner box?

Solar combiner boxes are required for those that have more than three solar panels in a system. Any system with three or fewer panels can benefit from a solar combiner box but does not need one. In this article, I will review what a solar combiner box is and the benefits it can provide to your solar system.

How does a solar combiner box work?

A solar combiner box brings all of the strings from each individual solar panel together into one system. The end of each panel string attaches to a fuse terminal. The combination of all of the fuse terminal outputs is a single cable that plugs into the inverter box.

Are solar combiner boxes a fire hazard?

Cheap solar combiner boxes can be fire hazards. The solar combiner box is the first station the power from your solar panel hits so you need to make you don’t lose your efficiency. Always purchase a solar combiner box that has a UL471 certification. Check the voltage requirements of the solar combiner box to make sure it fits your system’s output.

How much does a solar combiner box cost?

Solar combiner boxes are usually around $100 to $300. Some of the best quality solar combiner boxes are usually in the middle range of these prices, around $175. Although it may seem to be an expensive investment, it is necessary for large solar systems and can still be beneficial to small solar systems.
