

# **10MW British photovoltaic energy storage container for wastewater treatment plant**

## Overview

---

Can photovoltaic and biogas be integrated in a WWTP?

Integrating renewable energy sources, biogas, and solar energy could provide up to 88% of the annual energy requirements of WWTPs. Recommendations are provided for further research considering the limited availability of integrated resources for studying the simultaneous utilization of photovoltaic and biogas systems. 1. Introduction.

What is a containerised mobile waste water treatment plant?

A containerised mobile waste water treatment plant is a packaged system where all wastewater treatment equipment is completely preinstalled in ISO shipping containers. The modular container system with the various components of a waste water plant are adjusted to customer requirements and can be easily transported by land and sea.

What is the current state of solar PV systems in WWTPs?

Strazzabosco et al. (2019) assessed the current state of solar PV systems in WWTPs and found that solar PV is primarily used in hybrid configurations with anaerobic digestion at WWTPs with flow rates greater than  $1.89 \times 10^4 \text{ m}^3/\text{d}$ . In these treatment plants, biogas meets 25%–65% of the total energy demand, and solar energy supplies 8%–30%.

Can solar PV be used at a WWTP?

At WWTPs with flow rates less than  $1.89 \times 10^4 \text{ m}^3/\text{d}$ , solar PV provides 30%–100% of the required energy and is typically used as the sole RES. On the other hand, most studies examining the applications of PV cells at WWTPs have focused on the conventional fixed-beam-supported technology.
