

12A battery can use inverter 1200w

Overview

How much battery does a 12 volt inverter need?

As a rule of thumb, the minimum required battery capacity for a 12-volt system is around 20 % of the inverter capacity. For 24-volt inverters, it is 10 %. The battery capacity for a 12-volt Mass Sine 12/1200, for instance, is 240 Ah, while a 24-volt Mass Sine 24/1500 inverter would require at least 150 Ah.

How much current does a 1200W Inverter Supply?

1200W inverter. However, if you are sure your load will never be over 1000W, then we can use that for calculating current. Smaller inverters tend to have low efficiency, so let's assume 85%. That means the battery will have to supply $1000/.85=1177W$.

How much battery does a 24 volt inverter use?

For 24-volt inverters, it is 10 %. The battery capacity for a 12-volt Mass Sine 12/1200, for instance, is 240 Ah, while a 24-volt Mass Sine 24/1500 inverter would require at least 150 Ah. The indicated battery capacity is only for the inverter. The capacity required for other loads should be added to it. How much power does an inverter consume?

.

What kind of battery for a 1000 watt inverter?

It's better to leave a little more power, for your 1000W requirement, I suggest a 1500W pure sine wave inverter + 200Ah battery. I was about the purchase an SOK 206 Ah battery, but was concerned by the 100A maximum discharge. I want to be able to operate a 1000 watt AC load for 15-20 minutes at a time (with charging in between).
