

20K high frequency inverter production

Overview

What is a high frequency inverter?

In many applications, it is important for an inverter to be lightweight and of a relatively small size. This can be achieved by using a High-Frequency Inverter that involves an isolated DC-DC stage (Voltage Fed Push-Pull/Full Bridge) and the DC-AC section, which provides the AC output.

What is a Deye Sun 18/20/21k-g04-lv solar inverter?

The Deye SUN-18/20/21K-G04-LV is a three-phase string inverter designed for residential and commercial solar installations. It boasts a maximum output power of 18kW, 20kW, and 21kW respectively, with a maximum PV input voltage of 700V. High Efficiency: With a maximum efficiency of 98.6%, it maximizes energy harvesting from your solar panels.

How does a solar inverter work?

An inverter used in a solar-first, mains complementary system works on a priority-based principle, where solar energy is given precedence over the mains power supply. The inverter intelligently manages power sources to maximize the use of solar energy while seamlessly switching to mains power when solar production is insufficient.

Which power supply topologies are suitable for a high frequency inverter?

The power supply topologies suitable for the High-Frequency Inverter includes push-pull, half-bridge and the full-bridge converter as the core operation occurs in both the quadrants, thereby, increasing the power handling capability to twice of that of the converters operating in single quadrant (forward and flyback converter).
