What is a 24V 600W inverter?

Inverter for home has overload protection, overheat protection, short circuit protection, and so on. 24V 600w inverter with peak power 1200w, which is a modified sine wave, converts your car battery power to AC power 110/120 Volt or 220/230/240 Volt for options, with a safe charging design to give your device multi-protection.

How much power does a 24V inverter consume?

A good sized 24V inverter could use about as much power just being on as your lights do. If the lights consume 45 watts and run for 12 hours a day, the total power usage would be 45 watts x 12 hours = 540 watts. The battery power required for losses plus the load could double that. The lights themselves may be DC, using a small transformer (wall wart) to go from 120Vac to (likely) 12Vdc.
