Overview

What is the ideal solar panel angle?

Therefore, the ideal solar panel angle for your array would be about 34 degrees. However, if you lived in New York City, NY, where your latitude averages about 40.7 degrees N, you might set your tilt angle at 41 degrees. Remember, you can expect the tilt angles to vary by about 15 degrees as the sun's location fluctuates with the seasons 5.

How does the solar panel angle calculator work?

Our solar panel angle calculator takes the guesswork out of panel positioning, suggesting panel tilt angles based on your location's latitude and your willingness to reposition based on the sun's seasonal dance across the sky. Start by entering your location in the search box.

What angle should a dual sun solar panel be installed on?

With the DualSun PV- T panels, which produce both electricity and hot water, the optimal angle is the same as for PV panels. Example: For a DualSun installation in Marseille, we recommend a 4-panel design for a family of 4. The best angle for that is maximum sunshine (37 °). Some panels are installed on the façade of a building.

What is the best tilt angle for solar panels?

The optimal tilt angle for solar panels typically equals your location's latitude. For most of the continental United States, this means angles between 25-45 degrees. You can fine-tune this by subtracting 10-15 degrees for summer optimization or adding 10-15 degrees for winter optimization.
