

# American Solar Air Conditioning

## Overview

---

How much does a solar AC cost?

We found that the investment in a solar AC generally pays for itself within 10 years of purchase. Angi reports the average homeowner spends \$3,400 on a solar air conditioner. In general, they cost \$1,600-13,000. Mini splits are more affordable, while solar-powered central air conditioners cost more.

What is a solar AC system?

Most solar AC systems are hybrid, meaning they use traditional electricity sources in addition to solar power. Hybrid systems are more popular in very hot environments where it's necessary to run the AC at night (when there's no sun) to keep comfortable. For complete off-the-grid air conditioning, there are solar-only systems.

Can a solar air conditioner run on both AC and DC?

Hybrid Powered Solar Air Conditioners Hybrid solar-powered air conditioners can run on both DC and AC at the same time, seamlessly. Such units can be connected to both the solar panels/batteries directly and to the grid at the same time. The unit can then use the appropriate power source according to the time of day and power load.

How does a solar AC work?

In simple terms, solar ACs use solar panels to power the air conditioning system. Solar panels collect energy from the sun. They convert this energy into power. That power either goes directly to the air conditioner or to a battery where it's stored until the AC needs it.
