

Andorra s anti-dumping measures on energy storage products

Overview

How many anti-dumping measures are there in the EU?

By mid-2025, 113 definitive anti-dumping measures are in force in the EU. Currently, 66 anti-dumping (and anti-subsidy) investigations are ongoing in various sectors. In a large number of cases, the subject of an anti-dumping investigation concerns raw materials or semi-finished products.

What are anti-dumping measures?

Anti-dumping measures: measures imposed on imports of a product that are being sold at a price lower than the normal value of the product and which cause material injury to EU producers. Dumping margin: the difference between the normal value and the price that the same exporter charges for that product on the EU market (export price).

Can anti-dumping measures be imposed on imports of a product?

Four conditions must be met before anti-dumping measures can be imposed on imports of a product: the anti-dumping measure must not be against the EU interest — the measures should not cause more harm to its overall economy than the relief brought to the industry suffering from the imports.

What if dumping harms the European industry?

In the event of dumping that harms the European industry, the Commission may impose remedies. In doing so, the Commission must demonstrate that EU companies that produce the same product have suffered material harm and that the anti-dumping measure is not against the interest of the Union.
