

# Are there many power signal base stations in Latvia

## Overview

---

What is Latvia's energy system?

Latvia's energy system is largely based on renewable resources, primarily hydropower from the Daugava River, supplemented by wind, solar, and biomass. While natural gas imports cover energy shortages, the country aims to increase wind and solar energy capacity, with significant progress already made in 2022.

How many power plants are there in Latvia?

Latvia has 5 utility-scale power plants in operation, with a total capacity of 2537.0 MW. This data is a derivative set of data gathered by source mentioned below. Data and information about power plants in Latvia plotted on an interactive map.

Does Latvia have a 330 kV power network?

Latvia's 330 kV power network represents the middle point of the energy system of the Baltic states between its northern and southern parts. All 330 kV substations, except for "Daugavpils", have a dual power supply. The 110 kV network has a circle scheme. The majority of the 110 kV substations have two transformers and a dual power supply.

Does Latvia need a thermal power plant?

Until now, Latvia has relied on electricity generated by hydroelectric power plants (HPPs), and the country's overall policy also included the development of thermal power plants (TPPs), as natural gas was a relatively cheap resource.
