

Ashgabat UPS Uninterruptible Power Supply

Overview

Why is an uninterruptible power supply necessary?

An uninterruptible power supply (Uninterruptible Power Supply or UPS) has become a necessity rather than a choice in various sectors of life, including industrial facilities, hospitals, homes, and offices. The electrical network may experience situations such as high or low voltage, sudden voltage jumps, or frequency changes.

What is ups output capacity?

The output capacity is the maximum power that the connected load can draw from the UPS system. It is expressed in VA (volt amperes). Currently, there are three types of the UPS systems: online, offline and line-interactive. Each of them has advantages and is more suitable for some applications than others.

What are the different types of ups?

Currently, there are three types of the UPS systems: online, offline and line-interactive. Each of them has advantages and is more suitable for some applications than others. The online UPS excels in providing high reliability and power protection. It is designed to provide continuous power to the connected load.

Which batteries are used in ups?

The batteries and battery management systems, constitute critical components of the UPS. The UPS uses mainly lead-acid and lithium-ion (Li-ion) batteries. Lead-acid batteries are reliable, cost-effective and have low internal resistance. On the other hand, they are robust, therefore suitable where weight and space are not an issue.
