

Automatic power off solar water pump

Overview

What is a solar water pumping system?

A solar water pumping system consists of a PV array, a motor, and a bore pump. Solar water pumping arrays can have permanent mounts, or installers may place them on passive trackers to increase pumping time and volume. Both AC and DC motors with centrifugal or displacement pumps are used in these circumstances.

How do I Turn Off my solar pump?

To turn off your solar pump when the tank is full, we recommend using a float valve, a reverse-action pressure switch, and a check valve. Use pressure as a signal to turn off your pump. For a step-by-step guide, watch our YouTube video.

Who is RPS in solar pumping?

RPS is a family-owned company of laser-focused mechanical, electrical and software engineers that live and breathe solar pumping almost every hour of every day. They have sales offices in a number of states now, but their main shop is in an Ag town in California (they do get poked fun of for this!).

Automatic power off solar water pump
