

# **Budget Scheme for Off-Grid Photovoltaic Containerized Units**

## Overview

---

What is an off-grid PV power system?

Off-grid PV power systems can range from a single module, single battery system providing energy to d.c. loads in a small residence to a large system comprising an array with hundreds of kW of PV modules with a large battery bank and an inverter (or inverters) providing a.c. power to the load.

Does this guideline support off-grid solar installations?

This Guideline supports solar installations that are off-grid and include systems where all the energy is supplied from solar photovoltaic modules (or when a fuelled generator is used either as a back-up or daily).

What issues will a photovoltaic system be focusing on?

The issues that will be focused on with regard to off-grid and edge-of-grid photovoltaic system will centre on: Security: A system that is sustainability affordable and provides an uninterrupted supply of energy which adequately meets the associated demand.

What is an off-grid DC-coupled system?

It provides information for designing an off-grid d.c.-coupled system (with battery charging directly from the modules) or an off-grid a.c.-coupled (battery charging from an a.c. source, usually an inverter connected directly to solar panels) system configuration or hybrid power systems.
