

Can a DC water pump be retrofitted with solar energy

Overview

Does a solar powered water pump need a big inverter?

With our DC Direct Solar Pumps, there's no need for a big inverter to power the pump. In fact, we see that most water pumping applications are well suited for solar systems that are directly connected to solar panels. Let's chat through a few examples of when a solar powered pump might be a better option compared to its AC counterpart:.

Can you convert a traditional electric pump to a solar-powered system?

Return on Investment The key to successfully converting a traditional electric pump to a solar-powered system lies in using solar pump inverters. These devices take the DC (direct current) power generated by solar panels and convert it into the AC (alternating current) required by most electric pumps.

Is a solar powered water pump a good choice?

In fact, we see that most water pumping applications are well suited for solar systems that are directly connected to solar panels. Let's chat through a few examples of when a solar powered pump might be a better option compared to its AC counterpart: Example 1: Josh's utility company has hiked up rates for the third time in two years.
