

# Can the base station be installed outdoors

## Overview

---

What is an outdoor base station?

The Outdoor base station has a maintenance-free, space-saving design and can be installed on walls, antenna masts or in tunnels. Thanks to its market-leading low power consumption and passive cooling, it is ideal for use in areas where power supply is critical or where there is a need for battery-based, portable base station solutions.

What is the TP-Link outdoor wireless base station?

The TP-LINK Outdoor Wireless Base Station pairs professional performance with user-friendly design, making it the perfect solution for both business and home users. Two external RP-SMA antenna interfaces allow the Outdoor Wireless Base Station to integrate seamlessly with TP-LINK's line of sector and dish antennas.

Why do we need more base station antennas?

As the number of mobile devices in a community grows, more base stations are needed. For that reason, more antennas are needed in such crowded locations as shopping malls where there are many mobile phone users. However, the shorter the distance between base station antennas, the lower the output power of each antenna.

Where is a base station antenna located?

The base station antennas are usually placed on rooftops, in masts or on building walls. Antennas are sometimes also installed in shopping malls, airports, offices, and other places with many mobile phone users. Indoor antennas are usually placed on walls or on ceilings. Each base station can only serve a limited number of mobile devices at a time.
