

# Can the inverter adjust the power

## Overview

---

What are inverter settings?

Inverter Settings 1. To set output voltage of inverter - This is normally 230 Vac. Possible values 210V ~ 245V. 2. Used to enable/disable the internal ground relay functionality. Connection between N and PE during inverter operation. - The ground relay is useful when an earth-leakage circuit-breaker is part of the installation.

What does a solar inverter do?

Learn more on our about us page. When you think about the function of the solar inverter, it fulfills a set of actions that will take power from the solar panel and change the Photovoltaic energy into a direct current. The other function will be to take power out of the battery and convert it into an active current (A/C) for usage.

How does a solar inverter dongle work?

Specifies the derating value of the solar inverter active power by percentage. If the Dongle does not detect any power meter data or the communication between the Dongle and the solar inverter is disconnected, the Dongle delivers the derating value of the solar inverter active power by percentage.

What is solar inverter export limitation?

In the solar inverter export limitation scenario, if this parameter is set to Enable, the solar inverter will derate according to the active power derating percentage when the communication between the solar inverter and the Dongle is disconnected for a period longer than Communication disconnection detection time.
