Who is Genso power technologies?

Genso Power Technologies offers reliable renewable energy solutions throughout Sri Lanka. Solar power, wind energy, and power backup systems for you.

What is a solar generator?

A solar generator is a compact electronic box which has three components integrated together. There are the charge controller, batteries and an inverter. Strangely though there is no solar component in the solar generator. The solar panels need to be purchased separately. In reality, the solar generator is just a battery-powered generator.

How do solar generators work?

Solar generators use solar panels to capture photons from the sun and charge a battery in the generator. Before the power is extracted, an inverter changes it to alternating current electricity, which is what most appliances use today. From there, the generator can power anything that “regular” fossil-fuel electricity can.
