

Communication industry repair base stations

Overview

What is an indoor base station?

An indoor base station comprises a communication room accommodating various communication equipment and a communication tower responsible for transmitting and receiving information. The communication room is equipped with wireless communication devices, transmission equipment, power supply equipment, air conditioning, and cable routing racks.

What is a typical communication equipment room (ground base station)?

Fig. 2. Layout of the typical communication room (Ground base station). 2.1.2. Role of Each Component The main forms of the communication equipment room are civil construction room, color-coated steel room [33, 34], and integrated (container) room.

What is a base station?

2.1.1. Composition of Typical Base Stations Base stations are a form of public mobile transmitters that facilitate information exchange between mobile phone terminals and switching centers. They are typically categorized into indoor and outdoor types, with indoor base stations being the predominant communication infrastructure, as shown in Fig. 1.

Can low-carbon communication base stations improve local energy use?

Therefore, low-carbon upgrades to communication base stations can effectively improve the economics of local energy use while reducing local environmental pollution and gaining public health benefits. For this research, we recommend further in-depth exploration in three areas for the future.
