

# **Cylindrical solar container lithium battery and square**

## Overview

---

Why is a cylindrical lithium ion battery better than a square battery?

The cylindrical lithium-ion battery production process is mature, PACK cost is low, battery product yield and battery PACK consistency is high; Due to the large heat dissipation area of the battery pack, its heat dissipation performance is better than that of the square battery.

What is a cylindrical battery?

The cylindrical battery is convenient for the combination of various forms and is suitable for the full layout of electric vehicle space design. Cylindrical batteries, however, are usually made of steel or aluminum, which are heavy and have relatively low specific energy.

What are the different packaging forms of lithium ion batteries?

There are three primary packaging forms of the lithium-ion battery, namely cylinder, square and soft package. Different packaging structures mean different characteristics, and they have their advantages and disadvantages.

What are cylinder batteries made of?

Cylindrical batteries, however, are usually made of steel or aluminum, which are heavy and have relatively low specific energy. At present, there are mature production companies in China, Japan, South Korea and the United States, such as SANYO, SONY, LG, Wanxiang A123 and so on.
