

Delivery time for high-temperature resistant folding containers

Overview

What is temperature-controlled packaging?

From pharmaceutical drugs needing cold chain management to fresh foods, the requirements for temperature control are diverse. Most temperature-controlled packaging solutions use materials and technologies to regulate temperature through insulation or active conditioning, preventing fluctuations that compromise product integrity.

Why should you choose a thermocontainer?

Made of resistant EPS and robustly constructed, the thermo container offers high stability and is particularly suitable for the storage and transportation of medical products or perishable goods. Thanks to the flexible sizes and individual adaptations, the Thermocontainer can be tailored to specific requirements.

What is a thermocontainer Max?

Lightweight yet stable, it protects products from temperature fluctuations and thus enables safe transportation. The Thermocontainer MAX offers 862 liters of volume in a compact 120×80 cm. Robust, lightweight design ensures safe, environmentally friendly transportation of food.

Delivery time for high-temperature resistant folding containers

Temperature Controlled Packaging

FAQ Resources What is Temperature Controlled Packaging? Temperature controlled packaging refers to shipping materials and accessories- box liners, pouches, insulated delivery bags- and ...
