

# Details of power station generator sets

## Overview

---

What are generator sets used for?

Available in power ranges from 5 to 3,900 kVA, these generator sets are a widespread solution in the market. They are essential for emergency power supply in critical services such as hospitals, shopping centres, and data centres. They are also used in industrial processes to provide a reliable and powerful power source.

What is a power station generator?

Based on diesel or gas engines, power station generators provide continuous power or grid stability power sharing when it is needed most. The systems are flexible in size and location, and readily available to meet urgent power needs. Outstanding fuel efficiency contributes to overall low lifecycle costs.

What are the different types of large generator sets?

Types of Large Generator Sets Diesel Generator Sets: These are the most common type due to their reliability, efficiency, and wide range of applications. Diesel gensets are used in various sectors, including construction, industrial, and emergency power.

What is a diesel standby generator?

Our diesel standby generator sets cover a complete power range with an industry-leading average load factor, reliability and availability. When disasters or unforeseen long-term power outages occur, or when power is needed in remote locations or for grid stability power demand, we offer complete solutions.
