## Overview

---

Do solar panels work in winter?

It's a common myth that solar panels don't work during winter. Interestingly, cold temperatures typically improve solar panel output, which means your panels will produce more power for each precious hour of sunshine during the short days of winter. Solar panels work by turning sunlight into electricity.

Do solar panels work in snow?

Let's talk about why solar panels are a great investment if you live in a snowy climate. Solar panels work well in the winter as long as they don't stay covered in snow. Solar panels are more efficient in colder weather than hot. Snow typically melts or slides off of panels, as they are installed at an angle. Do solar panels work in the winter?

.

Why do solar panels work in cold climates?

That's because solar panels absorb energy from the sun's abundant light, not the sun's heat. In fact, cold climates are actually the optimal environment for solar panel efficiency. 1 So long as sunlight is hitting a solar panel, it will generate electricity.

Why do solar panels produce more electricity in winter?

Electrons are at rest (low energy) in cooler temperatures. When these electrons are activated by increasing sunlight (high energy), a greater difference in voltage is attained by a solar panel, which creates more energy. That's why solar cells produce electricity more efficiently when it's colder in the winter. 3
