

Emergency power generation and energy storage

Overview

Why do we need energy storage systems?

By providing power and lighting during large-scale weather events such as Superstorm Sandy and Hurricanes Irene and Katrina, energy storage systems of all shapes and sizes reduce the time it takes for first responders to begin recovery efforts.

What is an emergency power system?

Safety and Independence: Emergency power systems are often dedicated to supporting life safety systems, including emergency lighting for egress, fire pumps, sprinkler systems, and fire alarm systems, ensuring that these critical functions remain operational during a power outage.

What is energy storage?

It's a new approach that enables energy storage—once a costly, passive (but necessary) disaster recovery asset—to emerge as a cost-effective, active participant that stands to make power systems and consumer services more resilient, more efficient, and more responsive to the need for a sustainable, readily-adaptable energy environment.

What are energy storage assets?

From flashlights to uninterrupted power supplies, energy storage assets have a long history of supporting critical infrastructure and services during times of natural disaster.
