

# Energy saving for outdoor base stations

## Overview

---

Modern base station equipment is designed with energy-saving technologies such as high-efficiency power amplifiers, low-loss cables, and intelligent control systems. What are the standardized energy-saving metrics for a base station?

(1) Energy-saving reward: after choosing a shallower sleep strategy for a base station, the system may save more energy if a deeper sleep mode can be chosen, and in this paper, the standardized energy-saving metrics are defined as (18)  $R_{ie} = E_{SM=0} - E_{SM=i}$ ,  $E_{SM=0} - E_{SM=1}$ ,  $E_{SM=1} - E_{SM=2}$ ,  $E_{SM=2} - E_{SM=3}$ .

Why do base stations waste so much energy?

When there is little or no communication activity, base stations typically consume more than 80% of their peak power consumption, leading to significant energy waste. This energy waste not only increases operational costs, but also burdens the environment, which is contrary to global sustainability goals.

Can a base station sleep strategy reduce energy consumption in UDN systems?

The goal of this paper is to find a base station sleep strategy in UDN systems that reduces the total system energy consumption while being able to guarantee QoS.

What is base station dormancy?

In response to the problem of high network energy consumption caused by the dense deployment of SBS, the base station dormancy technique is seen as an effective solution, as it does not require changes to the current network architecture and is relatively simple to implement. This technique was first proposed in the IEEE 802.11b protocol.

## Energy saving for outdoor base stations

---

Proactive Energy Saving Technique for Cellular Base ...

May 3, 2023 · Cellular Traffic Prediction model and Power Saving In [5], authors are describing how Base stations are a great energy consumer and growing amount of base stations are also ...
