

# **Energy storage container transportation weight**

## Overview

---

What is a battery energy storage system?

Battery energy storage systems (BESS) are the most common type of ESS where batteries are pre-assembled into several modules. BESS come in various sizes depending on their application and their usage is expected to rise considerably in coming years.

Is a 20-foot shipping container a challenge for transportation?

Energy-Storage.news has heard from many industry sources that the drive to ever higher energy density within the 20-foot shipping container form factor was beginning to present a challenge for transportation, particularly in geographies where roads could not support such heavy systems.

What are energy storage systems (ESS)?

According to the International Energy Agency, energy storage systems (ESS) will play a key role in the transition to clean energy. Sometimes referred to as “energy storage cabinets” or “megapacks”, ESS consist of groups of devices that are assembled together as one unit and that can store large amounts of energy.

What is un 3536 ( lithium batteries installed in cargo transport unit)?

UN 3536 (Lithium batteries installed in cargo transport unit). Carriers should also be aware of the applicability of the different special provisions (SP) of the IMDG Code. SP 389 (which mentions the securing of batteries to the interior structure of the cargo transport unit) is applicable only to UN 3536.
