

Energy storage per cubic meter of lead-acid battery

Overview

The energy density of a PbA battery is relatively low at 25 to 100 kWh/m³ when compared with a Li-ion battery at 150 to 500 kWh/m³; however, it has excellent low-temperature stability [1]. What can we learn from lead battery energy storage?

A selection of larger lead battery energy storage installations are analysed and lessons learned identified. Lead is the most efficiently recycled commodity metal and lead batteries are the only battery energy storage system that is almost completely recycled, with over 99% of lead batteries being collected and recycled in Europe and USA.

Are lead-acid batteries a good choice for energy storage?

Lead-acid batteries have been used for energy storage in utility applications for many years but it has only been in recent years that the demand for battery energy storage has increased.
