

Factory price d curve breaker in Cyprus

Overview

What is a D-curve breaker?

D-curve breakers are suitable for circuits with high inrush currents, such as motors. They handle 10–20 times the nominal current. D-curve breakers are more sensitive to tripping than B- and C-curve breakers, making them unsuitable for circuits with low inrush currents.

How to choose a circuit breaker from Klinkmann store?

From Klinkmann Store, you will find high-quality and safe Chint and Rockwell Automation circuit breakers suitable for various applications. The selection of a circuit breaker depends on the specific electrical installation and its requirements. We always recommend consulting a qualified electrician to ensure the correct choice of breaker.

What is a D-trip circuit breaker?

Breakthrough current is the maximum current that the circuit breaker can safely stop in the event of a short circuit. D-trip circuit breakers prevent nuisance tripping, so they are best for equipment that has a high spike in current at startup, such as transformers, power supplies, and heaters.

What is a C-curve breaker?

C-curve breakers are commonly used to protect circuits with devices that have a relatively low inrush current, such as lighting, outlets, household appliances, and small machinery. These breakers handle 5–10 times the nominal current and react slower to overloads and short circuits compared to B-curve breakers, as their tripping current is higher.

Factory price d curve breaker in Cyprus

Circuit breakers from stock , Lower price and free delivery

We deliver B-curve, C-curve, and D-curve circuit breakers, along with other automatic fuses, directly from our online store with fast and reliable service. Orders over EUR140 qualify for free ...
