

# Fire resistance rating of energy storage container walls

## Overview

---

What is a fire proof storage container?

Our fire proof storage containers are fully tested and certified as REI 120 in accordance with the current European standard EN 13501-2 and allow you to store flammable substances close to buildings or directly on the production floor.

Are battery energy storage systems a fire hazard mitigation strategy?

The challenges of providing effective fire and explosion hazard mitigation strategies for Battery Energy Storage Systems (BESS) are receiving appreciable attention, given that renewable energy production has evolved significantly in recent years and is projected to account for 80% of new power generation capacity in 2030 (WEO, 2023).

How do I know if a storage container is ReI 120?

In order for a storage container to be classified as REI 120, its load-bearing capacity, air tightness and fire insulation must achieve at least 120 minutes. DENIOS fireproof containers have passed Efectis fire tests in accordance with EN 13501-2.

Why should you invest in a fireproof storage facility?

Investing in a fire proof storage facility means that hazardous substances can be stored close to production in the most convenient way. In the event of a fire, fireproof containers protect your raw materials for at least 120 minutes, giving the fire brigade time to respond.
