Why should you install a flat roof solar system?

Flat roof solar installation represents an excellent opportunity to harness clean energy while maximizing system performance. With proper planning, experienced installation, and regular maintenance, flat roof solar systems provide reliable, efficient renewable energy for decades.

What types of solar panels can be installed on a flat roof?

There are three main types of photovoltaic systems that can be used on flat or low slope roofs: Penetrating system: solar panels are installed on a mounting system that penetrates the roofing membrane. Detailing becomes critical to ensure the water tightness of the roofing system.

How long does a solar roof last?

Given that rooftop solar investments are long-term, spanning 20-25 years, the roofing system must be built to last. A flat solar roof system features a sturdy roof deck, a vapor barrier, insulation, and a waterproofing membrane, over which the solar panels are installed.

Are flat roofs good for solar panels?

Flat roofs are perfect for solar panel installations because of their wide, open spaces. Unlike pitched roofs, flat roofs let you place panels with more flexibility, ensuring you get the most sunlight and energy production possible. These roofs are common in commercial buildings and modern homes, making them a valuable option for solar energy.
