

# **Fornafoti Airport uses 20MWh photovoltaic container**

## Overview

---

Can solar energy be used in airports?

Solar photovoltaic systems have also been widely adopted in airports worldwide, with Cochin International Airport serving as the first fully solar-powered airport (Sukumaran and Sudhakar 2017). These successful implementations showcase the aviation sector's progress in harnessing solar energy for sustainable operations.

What are the different types of solar energy used in airports?

By focusing on solar collectors, solar photovoltaic (PV), wind energy, wave energy, tidal energy, hydro energy, and geothermal energy, this study aims to comprehensively understand their characteristics, practical uses, and potential advancements in airport settings.

Can solar power transform airports?

The transformation of airports through solar power goes beyond an environmental initiative—it demonstrates the potential of large-scale solar installations. By incorporating solar energy, airports can achieve significant energy cost reductions, with estimates ranging from 40-60%.

Are solar power systems paving the way for greener airports?

As airports around the world embrace solar energy, they are proving that large-scale renewable power systems are vital for the future of airport infrastructure. These advancements are paving the way for greener, more efficient airports globally, showcasing the transformative power of solar energy.
