

Havana LiFePO₄ Battery Pack

Overview

Why do you need A LiFePO4 battery pack?

Why Build a LiFePO4 Battery Pack?

LiFePO₄ (Lithium Iron Phosphate) batteries dominate renewable energy storage, electric vehicles, and off-grid systems for their safety, 10x longer lifespan than lead-acid, and eco-friendly chemistry.

What is a LiFePO4 battery?

The 12.8V 7.2Ah battery pack employs high-stability lithium iron phosphate (LiFePO₄) cells, specifically engineered for medium-power applications demanding sustained power delivery, enhanced safety, and dependable performance.

How do you charge a LiFePO4 battery?

Wrap cells in fish paper. Seal connections with heat shrink tubing. Mount pack in a ventilated case (prevents thermal runaway). Charge at 0.5C (e.g., 50A for 100Ah pack) using a LiFePO₄-compatible charger. Monitor cell voltages - deviations >0.1V indicate balancing issues. Store at 50% charge if unused for months.

What is a 24v-72v LiFePO4 battery?

The multiple advantages of our 24V-72V LiFePO₄ lithium batteries over traditional packs lie in their superior characteristics for each important criterion. Incredible power density is packed into Limodish batteries. This works best for applications with stringent requirements on weight or size, such as medical equipment and electric vehicles.
