

High-efficiency solar-powered containers for ships

Overview

Can solar power be used in inland shipping?

For the first time in inland shipping, solar energy can be transferred directly to the vessel's drivetrain, advancing clean propulsion technology. The Blue Marline is the first inland shipping vessel capable of hybrid sailing with solar power. Wattlab.

Can solar panels be used on cargo ships?

The possibility of using solar photovoltaic (PV) modules aboard cargo vessels in Dutch waterways was investigated in research by Jong and Ziar . The goal of the project was to reduce CO₂ emissions by equipping inland cargo boats with PV panels.

How much solar energy can a ship generate a day?

The proposed system could generate 5.8 kWh of solar energy per day, enabling up to 7 h of daily operation. The ship utilized a photovoltaic generation system, a diesel engine, battery energy storage, a hybrid control system, and an inverter.

Can solar PV systems be used on ships?

The research aimed to enhance overall reliability, islanding protection, and fault detection of DC grid-connected solar PV systems on ships. The study suggested directions for implementing larger solar systems and improving hybrid control techniques.
