

# Household inverter DC arc function

## Overview

---

How to prevent the arcing of the DC side of the inverter?

2.Solax's solution In order to prevent the arcing of the DC side of the inverter from causing fires and other hazards, SolaX engineers have developed the integrated AFCI function, which detects the arcing of the DC side and cuts the circuit in time to protect the user and the electrical system.

Can DC arcing protect the inverter and photovoltaic system?

This paper presents a protection solution based on DC arcing test that monitors and analyses DC arcing to protect the inverter and the photovoltaic system. The test results show that this solution can effectively improve the reliability and safety of the inverter, avoiding equipment damage and accident caused by DC arcing. 01. BACKGROUND.

Do solar inverters need AFCI protection?

These rules mandate that all solar inverters operating at any DC voltage higher than 120 V have to include AFCI protection to prevent fires caused by arc faults. Solar inverters without AFCIs were still allowed until the end of 2024, but from 2025 onwards, compliance is mandatory for certification and safety inspections.

What happens after DC arcing protection function is enabled?

After the DC arcing protection function of the inverter is enabled, the inverter will test the input current of each string in real time. After the characteristic current phenomenon of the arc (as shown in the figure above) is tested, the inverter will immediately switch off the AC side and report an error.

## Household inverter DC arc function
