

How big an inverter should I use for a household fan

Overview

You can run most fans with a 150 watt inverter. Fans are energy efficient ways of cooling a room. Whether it's a pedestal fan, box fan, ceiling fan, or portable fan, you won't need too much power. Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

How much power does an inverter need?

For example, if your total running wattage is 2200W and your surge wattage adds another 400W, your total power requirement is 2600W. Inverters typically operate at an efficiency of around 85%-95%. To ensure your inverter can handle your total load, divide your total power consumption by the inverter's efficiency.

How do you calculate inverter size?

Precisely calculating inverter size requires tallying the peak wattages of all electronic devices and appliances you need to power. Don't forget voltage spike and future growth buffers. Also factor in the power factor efficiency to determine the true minimum volt-amperes.
