## Overview

What is solar power storage?

Strictly speaking, solar power storage is not just a battery but a rechargeable solar battery. In case of strong solar radiation the generated solar energy exceeds the energy demand of the house. The excess energy is passed into the solar battery and charges it, like a battery.

What size solar battery do I Need?

The size of the solar battery you need will depend on the size of your home — specifically, how many bedrooms it has. To work out what size battery you'll need, you can start by calculating your electricity usage. Look at either your smart meter or your monthly energy bill, which will tell you how much you use on average.

What is solar storage capacity?

The nominal storage capacity is the amount of energy that the solar storage can maximally absorb. The actual usable capacity multiplies this value by the discharge depth and is thus more meaningful. During charging and discharging, the solar battery emits heat to the environment. As a result, part of the stored solar power is lost.

What size battery should a 10 kW solar system have?

10 kW solar system with a battery — The ideal size solar battery for a 10 kWp solar panel system is 20–21 kW, as it'll be able to make sure the battery is properly charged throughout the day. Which solar products are you interested in?
