## Overview

---

How long does solar energy last?

Theoretically, solar energy stored mechanically can last as long as potential energy is maintained. There's always energy lost in any energy transfer, and in the case of mechanical storage, leaks always occur during storage and release. The same applies to batteries. Generally, a standard solar battery will hold a charge for 1-5 days.

How is solar energy stored?

Like all electricity, solar energy can be stored in a variety of ways. To get a bit technical, solar power may be stored either: While mechanical solar energy storage is more common at large scales, the majority of homes and commercial buildings utilize batteries for their size and convenience.

Is battery storage a good way to store solar energy?

Thankfully, battery storage can now offer homeowners a cost-effective and efficient way to store solar energy. Lithium-ion batteries are the go-to for home solar energy storage. They're relatively cheap (and getting cheaper), low profile, and suited for a range of needs.

Do you need solar energy storage?

Because larger solar energy systems for homes and businesses are often connected to the power grid, solar energy storage is not always necessary. That's because grid-tied systems can send the excess power they produce out to the utility grid, potentially netting their owners a profit through net metering.
