

# **How many telesolar container communication stations are there in Ireland with hybrid energy**

## Overview

---

How many hyperscale data centres are there in Ireland?

As of July 2023, 77% of the designed power capacity of the Dublin region data centres is classed as hyperscale.<sup>16</sup> It is not clear how many hyperscale data centres there are in Ireland, it is probably in the order of ten or fewer.

Will data centres make up 33% of Ireland's Electricity demand?

In the government statement on the role of data centres in 2021, it stated that “EirGrid predicts that if all contracted capacity were connected, data centres would make up between 25% and 33% of Ireland’s electricity demand by 2030.

What is the electricity distribution system in Ireland?

The distribution system delivers electricity from the transmission system to over 2.5 million customers in Ireland. It operates at 110kV in the Dublin area, and at 38kV, 20kV, 10kV, and low voltage (LV) across the country. Because Ireland has a lot of rural areas, the network is much longer per person than in other European countries.

Does Ireland have a power grid?

Ireland is investing heavily in linking our electricity grid with neighbouring countries using interconnectors. These are large cables of transmitting huge amounts of electricity and we currently have two in operation with the UK, and another connection with France will soon be operational.
