

How much does a sodium battery for energy storage cost per kilowatt-hour

Overview

The average cost for sodium-ion cells in 2024 is \$87 per kilowatt-hour (kWh), slightly cheaper than Lithium-ion cells at \$89/kWh. How much would a sodium ion battery cost in the future?

Based on material costs of \$4 per kWh there could be \$8 to \$10 per kWh sodium ion batteries in the future. This would be ten times cheaper than energy storage batteries today. Soda Ash Mine in Wyoming.

Will sodium-ion batteries dominate the future of long-duration energy storage?

With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. Sodium-ion batteries' rapid development could see long-duration energy storage (LDES) enter mainstream use as early as 2027.

Are sodium ion batteries a good choice?

Challenges and Limitations of Sodium-Ion Batteries. Sodium-ion batteries have less energy density in comparison with lithium-ion batteries, primarily due to the higher atomic mass and larger ionic radius of sodium. This affects the overall capacity and energy output of the batteries.

How much does sodium ion cost per kWh?

However, the second generation sodium ion could reach \$40 per kWh. Iron LFP batteries could get to \$50/kWh with really high volume and efficiency at the cell level. The future low price of sodium ion would make for insanely cheap fixed storage products like the Tesla Megapack and Powerwalls. They also do not have practical material limits.
