

How much electricity does solar energy produce per megawatt

Overview

How much energy does a solar power plant produce?

On average, a solar power plant of 1 MW can produce around 1.2 to 1.5 gigawatt-hours (GWh) annually. While typical solar panels generate about 2 kWh per day on average, actual production varies based on geographical location and panel size. In 2024, most residential solar panels produce between 350 and 450 watts.

How many megawatts does a solar plant produce?

A megawatt signifies one million watts, requiring roughly 3,000 to 4,000 solar panels to generate 1 MW, influenced by panel output and sunlight availability. If a plant produced daily power year-round, it would yield 5,098,320 MWh, though most do not operate at full capacity consistently.
