

# How much power does Oman Communications 5G base station generate

## Overview

---

How much energy does a 5G base station consume?

Because it is estimated that in 5G, the base station's density is expected to exceed 40-50 BSs/ Km<sup>2</sup>. The energy consumption of the 5G network is driving attention and many world-leading network operators have launched alerts about the increased power consumption of the 5G mobile infrastructure.

Does Oman have a 5G network?

In Oman, the TRA has implemented measures to promote infrastructure sharing among mobile operators, which can enhance the efficiency and cost-effectiveness of 5G network deployments.

How many 5G base stations will Omantel have?

Omantel launched its 5G network in December 2019, utilizing the 3.4 - 3.6 GHz frequency band. 1 The Telecommunications Regulatory Authority (TRA) had set a target for operators to deploy 4,400 5G base stations over a five-year period starting in October 2019.

Should power consumption models be used in 5G networks?

This restricts the potential use of the power models, as their validity and accuracy remain unclear. Future work includes the further development of the power consumption models to form a unified evaluation framework that enables the quantification and optimization of energy consumption and energy efficiency of 5G networks.
