

# How to match energy storage batteries in solar power stations

## Overview

---

Can battery energy storage systems be used in solar power plants?

However, the mismatch between solar production curves and load consumption patterns can make this difficult. One of the most effective and increasingly popular solutions is integrating Battery Energy Storage Systems (BESS) with your solar PV installation. But when exactly is BESS used in solar power plants and how does it work in practice?

.

How to match solar panels with batteries?

If you need 30 kWh daily and want 2 days of autonomy, then you need a battery with a minimum capacity of 60 kWh. Choose battery types that match your system's voltage and charging requirements to ensure compatibility. By following these steps, you can effectively match solar panels with batteries to optimize your energy system.

What is a battery energy storage system?

**BESS:** Battery Energy Storage Systems are composed of PCS and Batteries.  
**EMS:** An Energy Management System is a controller able to execute a high-level strategy decided by the final user.  
**Solar power plants:** In this article, the term refers to large-scale solar installations with a capacity greater than 1 MWp.

Can battery storage be used during non-solar hours?

Solar power plants have become a cornerstone of this transition, generating clean, renewable energy. However, solar energy production is inherently intermittent—limited to daylight hours and weather conditions. This is where battery storage systems step in, storing excess energy for use during non-solar hours.
