

Humidity control and energy storage inside the container

Overview

How to control the humidity of a container?

To control the humidity of the container, there are different ways, either a handmade coating that covers the entire interior of the container, or silica gel to protect the products, or a dryfreight bag that absorbs the humidity of the ambient air of your cargo thanks to calcium chloride, a drying substance.

Can a container-type ESS control temperature and humidity?

In this study, temperature and humidity monitoring and management issues were addressed for a container-type ESS by building sensor-based monitoring and control systems. Furthermore, a rule-based air conditioner control algorithm was proposed for temperature and humidity management.

How much energy does a container storage temperature control system use?

The average daily energy consumption of the conventional air conditioning is 20.8 % in battery charging and discharging mode and 58.4 % in standby mode. The proposed container energy storage temperature control system has an average daily energy consumption of 30.1 % in battery charging and discharging mode and 39.8 % in standby mode. Fig. 10.

How to control the indoor temperature of ESS containers?

The indoor temperature of the ESS container can be controlled to maintain the battery temperature below the target temperature. Generally, economical and simple forced air convection systems (FACS) are used to manage the indoor temperature of ESS containers .
