Indoor solar energy regulation system

Overview

Are indoor solar panels a viable alternative to solar irradiation?

Indoor PV is often controllable and more predictable than solar irradiation, and so the energy usage and capacity can be reliably anticipated. Therefore, this abundant and reliable light source means the opportunities for indoor devices to be powered by photovoltaics are vast.

What is indoor photovoltaics (IPV)?

Indoor photovoltaics (IPV) - sometimes known as indoor solar panels - may seem like a contradictory statement, but this technology shows great potential across many industries. IPV consists of conventional photovoltaic technology but instead of using sunlight to promote conductivity, they use energy from artificial light sources.

Can organic solar cells be used in indoor environment?

The first report of organic solar cells came to light in 2010 when Minnaert et al. shelled out applicability of OSC in indoor environment Minnaert and Veelaert . Ten years down the lane, currently it has reached to almost 30 % PCE .

Can indoor photovoltaics power IoT sensors?

Nature Reviews Clean Technology 1, 132–147 (2025) Cite this article Indoor photovoltaics (IPVs) harvest ambient light to produce electricity and can cleanly power the rapidly growing number of Internet-of-Things (IoT) sensors.
