

Installation of inverter cabinet for solar container communication station

Overview

What is a proinsener solar inverter station?

Proinsener Solar inverter stations are designed and integrated specifically for each project. It is an easily installable and compact product perfect for generating solar power on a large scale. All this allows easy and quick field connection to the medium voltage transforming station (MV), which reduces transport and installation costs.

How a photovoltaic inverter station works?

In each inverter station all of the necessary equipment is integrated to connect to the medium voltage network of the photovoltaic plant, always complying with the standards of performance and quality required according to the project and its location.

Can CSI solar inverter be installed under load?

CSI Solar Co., Ltd. **DO NOT DISCONNECT UNDER LOAD!** Do not install the inverter on structures constructed of flammable, thermolabile, or explosive materials. Ensure the inverter is out of children's reach. The ambient temperature should be between -30°C ~ 60°C . The humidity of the installation location should be below 100% without condensation.

How do I connect multiple inverters to a PV system?

When there is only one inverter in the PV system, connect the additional grounding cable to a nearby grounding point. When there are multiple inverters in the PV system, connect grounding points of all inverters and the PV array frames to the equipotential cable (according to the onsite conditions) to implement an equipotential connection.

Installation of inverter cabinet for solar container communication st

Photovoltaic Container

The integrated containerized photovoltaic inverter station centralizes the key equipment required for grid-connected solar power systems -- including AC/DC distribution, inverters, monitoring, ...
