

# Is the inverter solar

## Overview

---

What does a solar inverter do?

The solar inverter is the key element that converts DC energy generated by solar panels to AC for use in powering appliances. The power captured by solar panels has nowhere to go if it isn't converted by an inverter.

What are the different types of solar inverters?

There are two types of solar inverters, off-grid and grid-connected, and our main product is an off-grid inverter. What Types Of Hybrid Inverter We Offer?

LFP (lithium iron phosphate) cell to ensure the highest safety. Built-In BMS protects the cell such as temperature, current, voltage, SoC, SoH. Compatible with most of the available inverters.

What type of electricity does a solar inverter use?

However, the majority of homes and businesses use alternating current (AC) electricity, which is better suited for long-distance power transmission and compatibility with most electrical appliances. Solar inverters are used to convert the DC electricity from solar panels into AC electricity that can be used directly or fed into the electrical grid.
