

# Is the larger the solar panel power the better

## Overview

---

Are bigger solar panels better?

Advantages of bigger panels: You get a slightly better Watts per m<sup>2</sup> because you have more solar cells and less aluminium framing. So you should be able to fit a slightly bigger system on your roof. Fewer panels are used for the same sized system, so there are fewer electrical connections, which in theory means a more reliable system.

Which solar panel size is best?

When it comes to solar panel size, the bigger the panel, the better. Large solar panels can generate more sun power and convert it into usable electricity. Commercial locations such as industrial companies will typically install large-scale solar systems.

Are commercial solar panels bigger than home solar panels?

Most commercial solar panels are slightly larger than home solar panels and typically measure up to 78 inches long by 39 inches wide. When it comes to solar panel size, the bigger the panel, the better. Large solar panels can generate more sun power and convert it into usable electricity.

Why are high-powered solar panels better than smaller solar panels?

Since larger panels require an equivalent amount of connections and labour compared to smaller panels, the installation cost per kW is reduced, resulting in a lower overall cost and decreased Levelized Cost of Energy (LCOE). As explained below, high-powered panels are far larger than those used on residential rooftops.
