

# **Israel environmental project uses 5MW solar-powered container**

## Overview

---

The Sorek desalination plant, Israel's largest facility, utilizes vast solar panel arrays that generate clean electricity to drive the reverse osmosis process. What percentage of Israel's Energy comes from solar?

Currently, only around 10% of Israel's energy comes from solar, according to previous reports by the Environmental Protection Ministry. However, the ministry has estimated that if solar panels were adequately distributed, solar installations could generate 40% of total electricity generation in Israel by 2030.

Is Mekorot required to invest in Israeli water infrastructure?

According to a subsequent government resolution dated February 2019, Mekorot (Israel's government-owned water utility company) is required to significantly increase its investment in the development of the Israeli water infrastructure.

What can the US do with Israel's waste?

Groundwater remediation, laying water pipes, and digital transformation projects (including advanced sensors, command and control systems, and new SCADA system) are also viable opportunities for U.S. exporters of equipment, technologies and services. As of 2020, Israel sends approximately 80% of its waste to landfill, while only 20% is recycled.

Is Israel nearing full capacity of its landfills?

Furthermore, the Ministry of Environmental Protection (MOEP) cautions that Israel is quickly approaching full capacity of its current landfills. To tackle this unsustainable status quo, the MOEP announced in 2021 a strategic plan to transform Israel's waste treatment industry.

## Israel environmental project uses 5MW solar-powered container
