

Liquid-cooled energy storage lead-acid battery cabinet

Overview

What is the 836kwh eflex flex battery storage cabinet?

Complete technical details and specifications for the 836kWh eFLEX BESS Liquid Cooled Battery Storage Cabinet system. Industrial facilities and urban areas often struggle to find space for large-scale energy storage solutions. The eFlex 836kWh system is designed to fit into even the most compact spaces.

What makes Aceon a good battery storage system?

Equipped with MSD fuses and intelligent Battery Management Units (BMUs), it delivers a safe and stable energy storage solution for even the most demanding environments. AceOn's battery storage systems rely on advanced LFP chemistry to provide a combination of high-power performance, low cost, and industry-leading safety.

Why do battery cells have a smaller temperature difference with liquid cooling?

Therefore, battery cells will have a smaller temperature difference with liquid cooling. Without fans on battery modules for air cooling means no noise emission from battery modules. Cooling liquid powered by the pump will circulate inside battery modules and take the heat from batteries.

How many temperature detectors does a battery module have?

Each battery module has 8 temperature detectors. There are 2 racks that fit in a single battery cabinet, 9 slots in each battery rack to accommodate 8 battery modules and total 1 BSPU (Battery Switch & Protective Unit). Racks are connected in parallel and paired with a system BMS to meet the power and energy requirements of the application at hand.
