

Malabo high current UPS uninterruptible power supply equipment

Overview

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

Why should you choose Mitsubishi Electric uninterruptible power supplies?

At 99.9995%, Mitsubishi Electric Uninterruptible Power Supplies achieve the highest equipment reliability among all UPS suppliers, ensuring you – and your customers – are protected against downtime 24/7/365.

How does a standby Ferro ups work?

The Standby-Ferro UPS (also known as standby ferro-resonant UPS) uses a three-winding transformer to couple the load to the power source. As shown in Figure 3, primary power flows through a normally closed transfer switch to the transformer coils, where it is coupled to the secondary coil and supplies power to the output load.

What is a standby UPS?

A Standby UPS is a battery backup system where the battery is charged by the main power supply and connected to an inverter through a transfer switch. As shown in the block diagram of Figure 1, during normal operation, the system runs on primary power while the inverter remains inactive.
