Overview

What is a rooftop solar system?

A rooftop solar system consists of solar photovoltaic (PV) panels mounted on the roof of a building. These panels absorb sunlight and convert it into electricity, reducing or even eliminating your dependence on traditional power sources.

Can solar panels be mounted on a metal roof?

The problem with mounting solar panels on a metal or asbestos roof is that the pitch of the roof is fixed, so changing the inclination for the most part is not possible. Orienting the solar panels toward north or south, whichever is best as per your location, is also not possible in most cases.

Is your roof fit for a solar panel system?

Not every roof is fit to host a solar panel system. A flat angle or partially shaded, inadequate space – in such scenarios, efficiency becomes poor. Hence, it requires proper analysis before final installation from an experienced solar installer by conducting site inspections, and rooftop evaluation for efficient production.

What are the best solar panels for rooftop installations?

Monocrystalline solar panels are one of the most popular choices on the market for rooftop installations. They are not only high-efficiency products but also look good.
