

# **Mobile Energy Storage Container Two-Way Charging**

## Overview

---

Can stationary and mobile storage reduce energy costs?

By integrating stationary and mobile storage systems into the energy infrastructure of factories, the potential for reducing energy costs and increasing sustainability is massively increased. As different storage technologies have their own unique advantages and disadvantages, the former of each can be leveraged by intelligent operating strategies.

What are the different types of energy storage options?

Scalable, Modular Energy Storage: Configurations range from 150kWh to 450kWh, with daisy-chaining options for extended capacity. Energy Storage Only – Providing flexible, off-grid power solutions. CCS DC Fast Charging – Featuring dual 150kW CCS chargers, suitable for high-speed public and commercial EV charging.

What are the challenges faced by mobile energy recovery and storage technologies?

There are a number of challenges for these mobile energy recovery and storage technologies. Among main ones are - The lack of existing infrastructure and services for multi-vector energy EV charging.

How to charge EV battery with PCM?

The PCM can be charged by running a heat pump cycle in reverse when the EV battery is charged by an external power source. Besides PCM, TCM-based TES can reach a higher energy storage density and achieve longer energy storage duration, which is expected to provide both heating and cooling for EVs [ , , , ].
